OpenMBEE: Connected Engineering Information for a Connected World

Presenters: Robert Karban and Hetav Patel, Jet Propulsion Laboratory

Abstract:

The Open Model Based Engineering Environment (OpenMBEE) platform has become a key driver for the adoption of a model-based digital ecosystem across different organizations by connecting engineering information across various sources. OpenMBEE is an integrated set of open-source software tools which replaces traditional silos of information with consistent, traceable, and precise engineering models and documents. This talk provides an overview of the vision, motivation, and available infrastructure of the OpenMBEE community, the SW platform, and its applicability to enterprise-level projects in industry.
